

Cryogene start-ups en cryogeen onderzoek aan de Universiteit Leiden

Martin de Wit, Gesa Welker, Freek Hoekstra, Jaimy Plugge, Tim Fuchs, Koen van Deelen, Dennis Uitenbroek

Tjerk Oosterkamp

Leiden University, the Netherlands

SRON cryo symposium

19-04-2022

Bedrijven in en om Leiden cryogene techniek (niet compleet)

- Leiden Cryogenics (1992)
- Leiden Probe Microscopy (2004)
- Leiden Spin Imaging (2014)
- Onnes Technologies (2018)
- Quantamap (2022)
- Hightech Development Leiden
- milliKelvin Technologies
- Cryolinks

Press this button
to add one

e.g. cosine, several in the space area

milliKelvins, positionering, vibratie isolatie, kabels, thermometrie,
nieuwe microscopie, integratie

Leiden Cryogenics

- Giorgio Frossati

Acknowledgements

Benard van Heck , Koen van Deelen
Jaimey Plugge, Gesa Welker, Tim Fuchs, Dennis Uitenbroek

Finemechanics/Electronics
Gert Koning, Merlijn Camp,
Kier Heeck

Companies: Leiden Cryogenics, Leiden Spin Imaging, Leiden Probe Microscopy,
Onnes Technologies, Delft Circuits, Hightech Development Leiden

Acknowledgements

Martin de Wit, Jelmer Wagenaar, Tom van der Reep, Freek Hoekstra, Dirk Bouwmeester
Koen van Deelen, Jaimy Plugge, Gesa Welker, Tim Fuchs, Kier Heeck, Dennis Uitenbroek

Plus many undergraduate students

Technical Support

Gert Koning, Merlijn Camp, Fred Schenkel
Ko Koning, Bert Crama

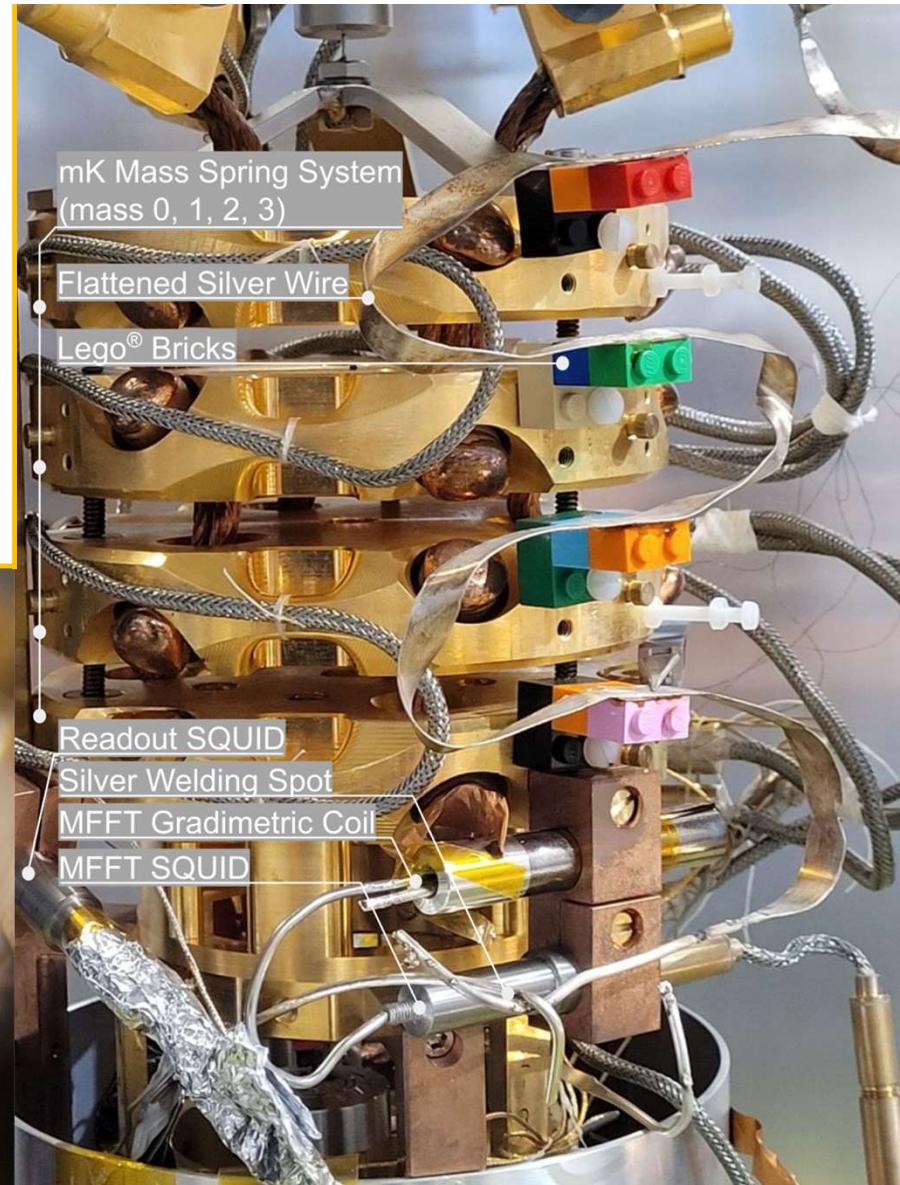

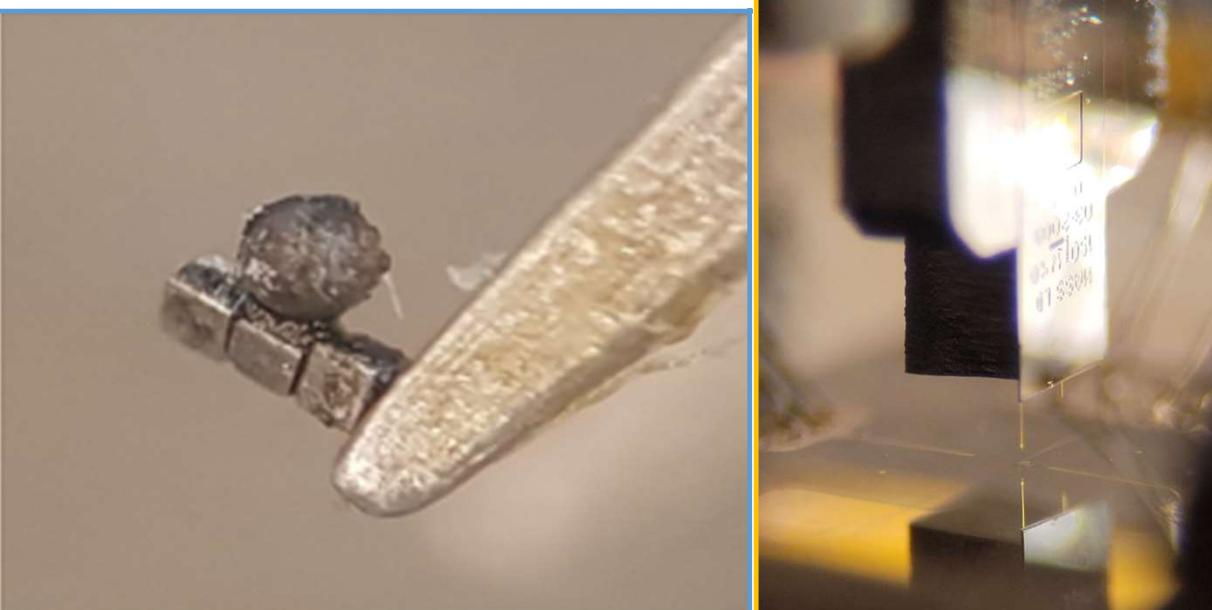

Companies: Leiden Cryogenics, Leiden Spin Imaging, Leiden Probe Microscopy,
Onnes Technologies, Delft Circuits, Hightech Development Leiden

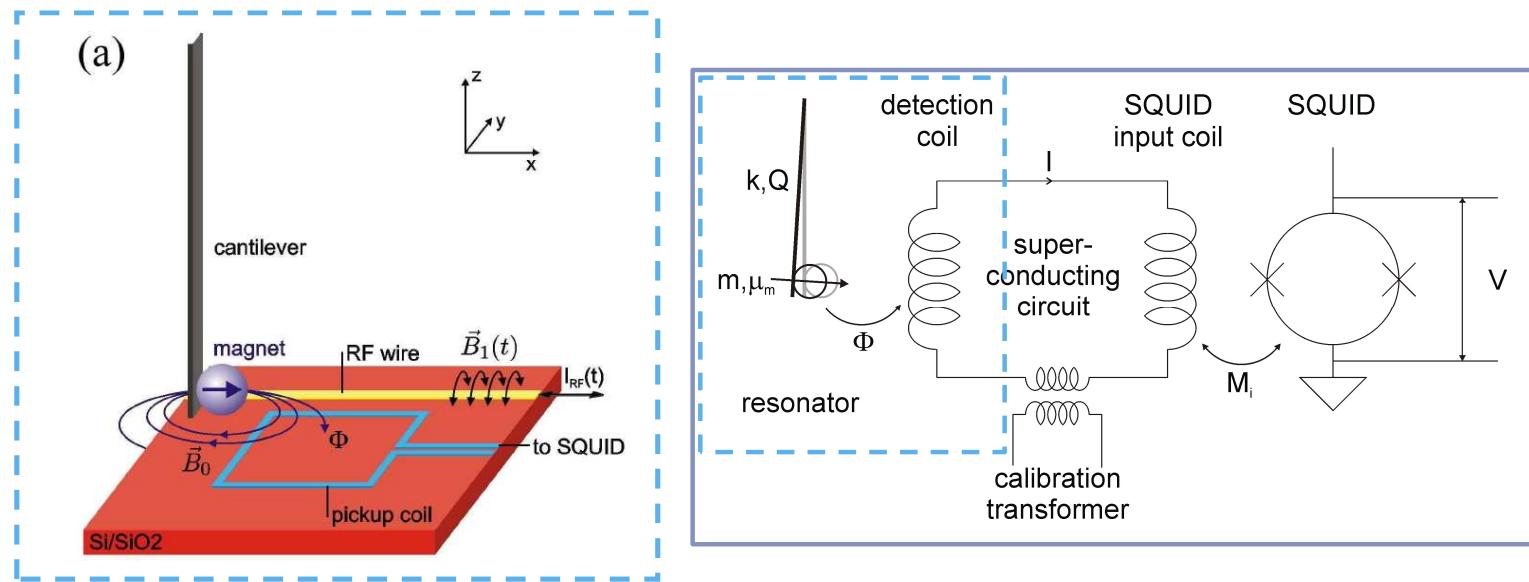

We meten zwaartekracht tussen kleine objecten en
We proberen objecten op twee plaatsen te laten zijn.

Towards a Unified Theory:

Small Scale Gravity, **Large Scale Quantum Mechanics**

SQUID provides a cantilever detection system compatible with mK-temperatures

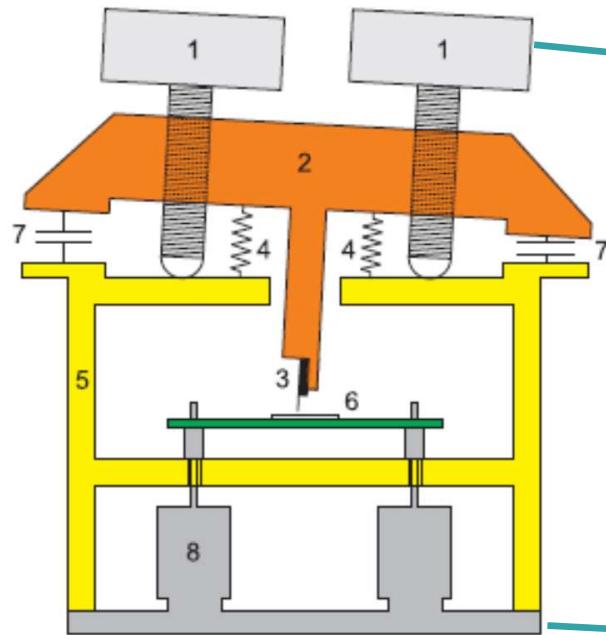

SQUID: Superconducting Quantum Interference Device

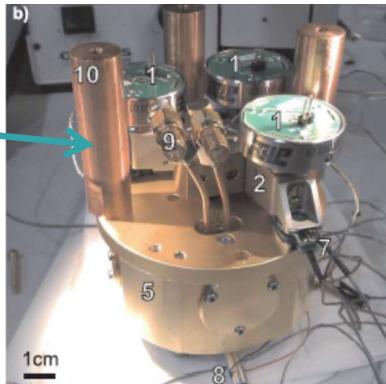

Flux noise: $\sim 0.6 \mu\Phi_0/\sqrt{\text{Hz}}$

10^{-21} T m^2 is a really small number!

The MRFM microscope

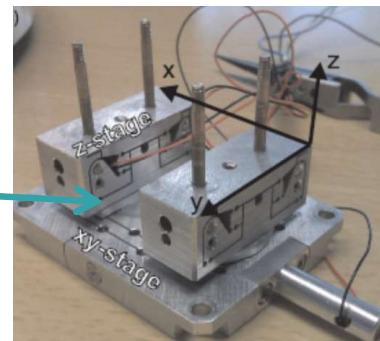

The experimental chamber

The coarse approach

- mm range
- nm precision

Janssen Precision
Engineering B.V.

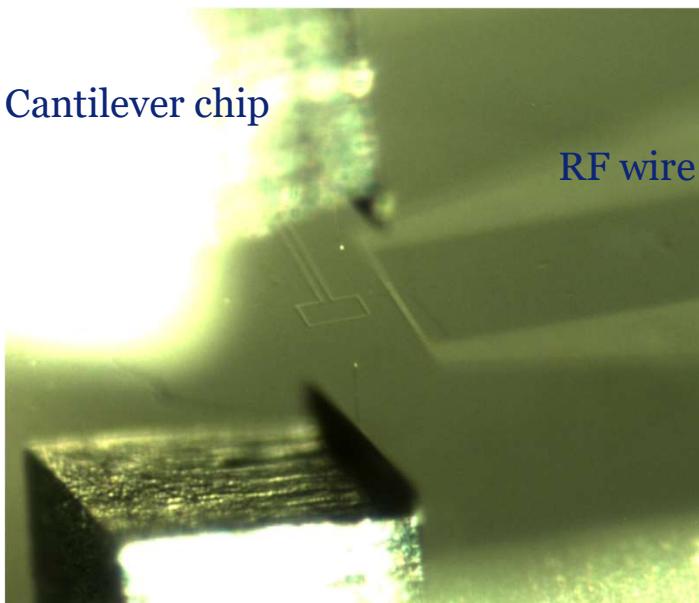

The fine stage (3x3 μm)

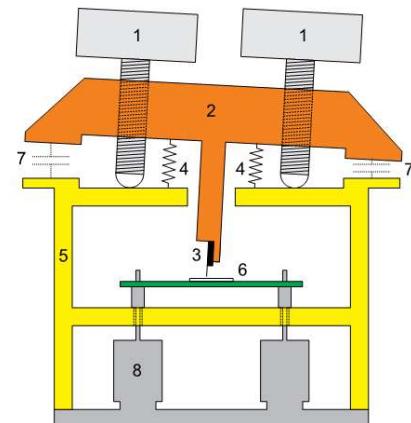

Home-made
FMD

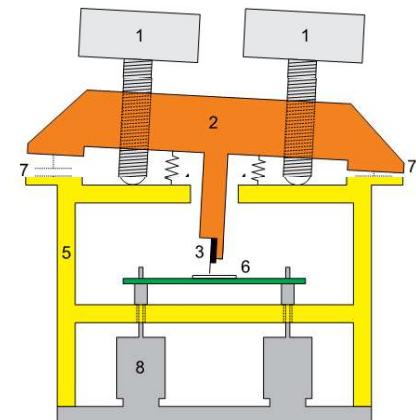

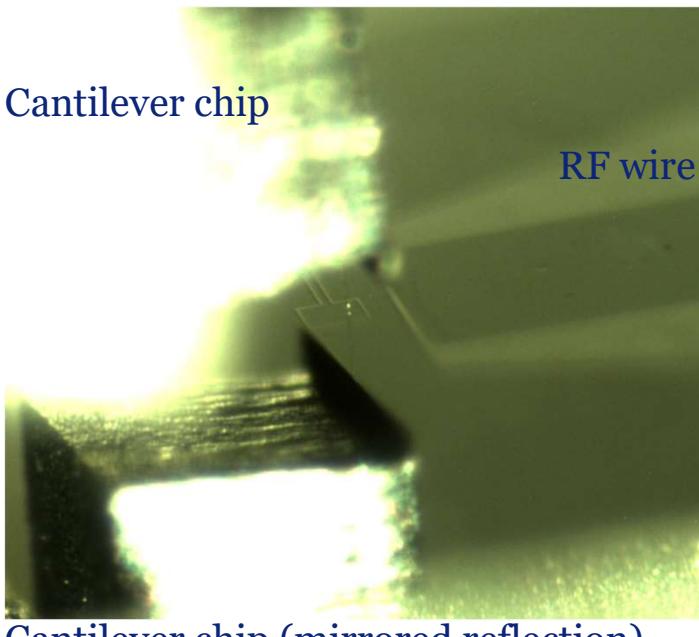

The coarse approach

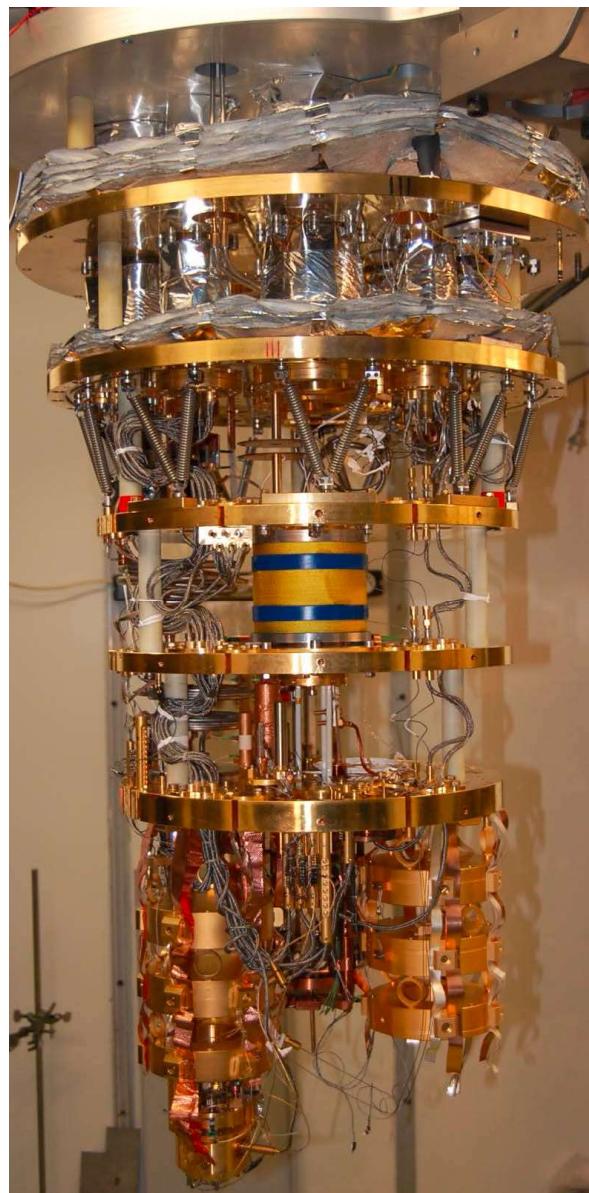

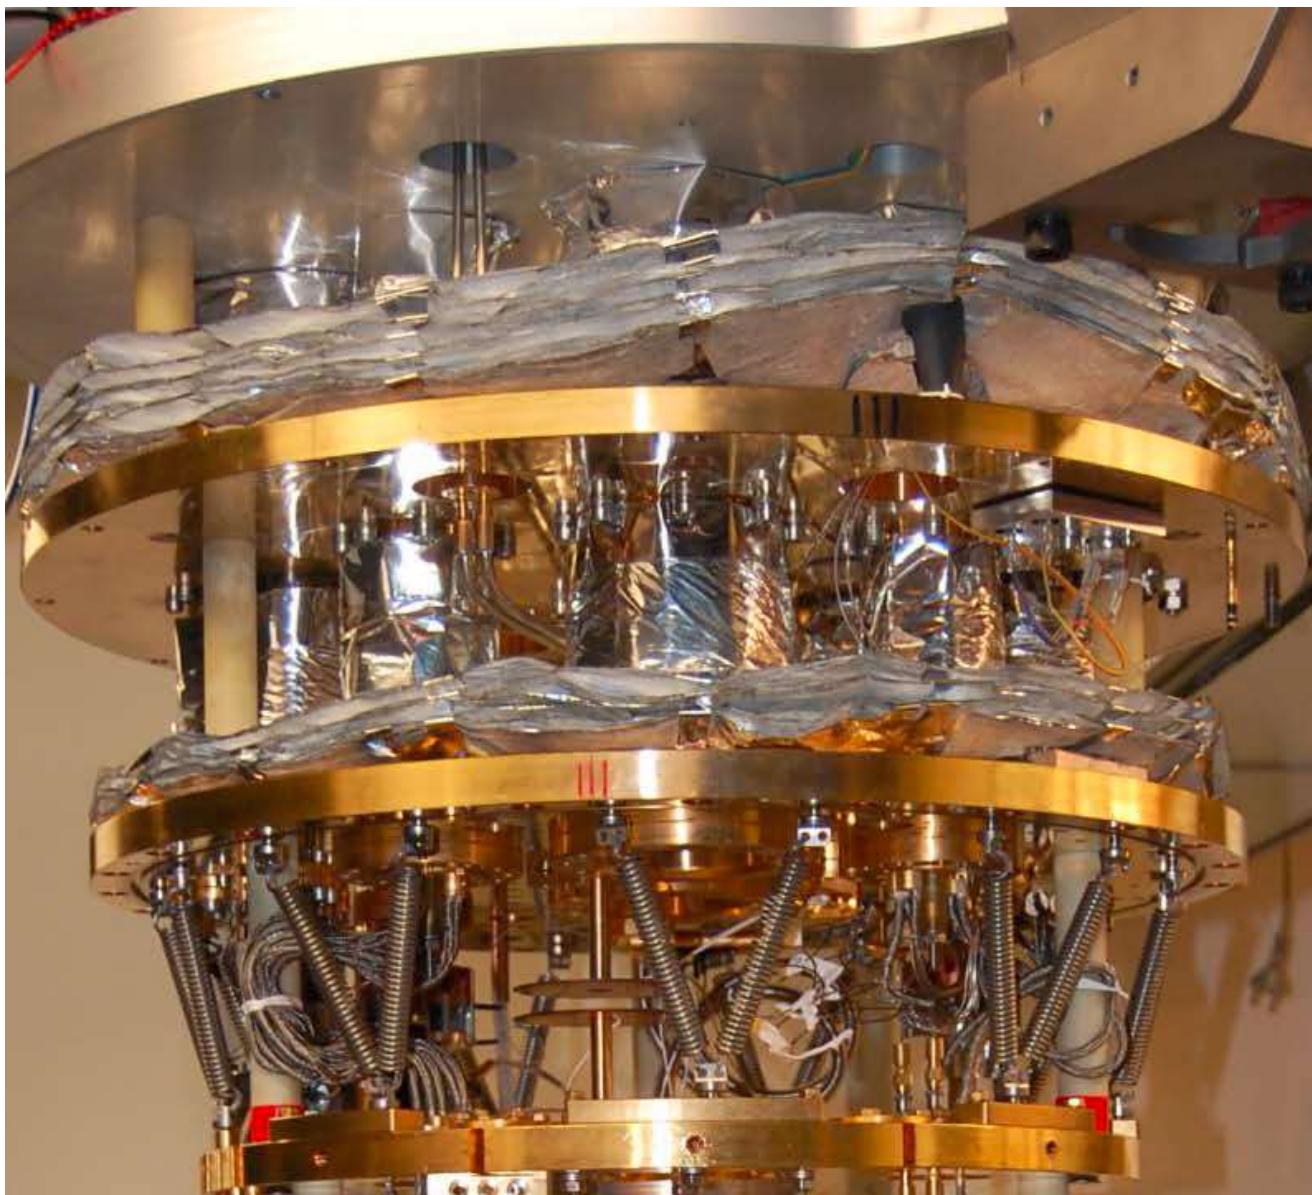

Cantilever chip (mirrored reflection)

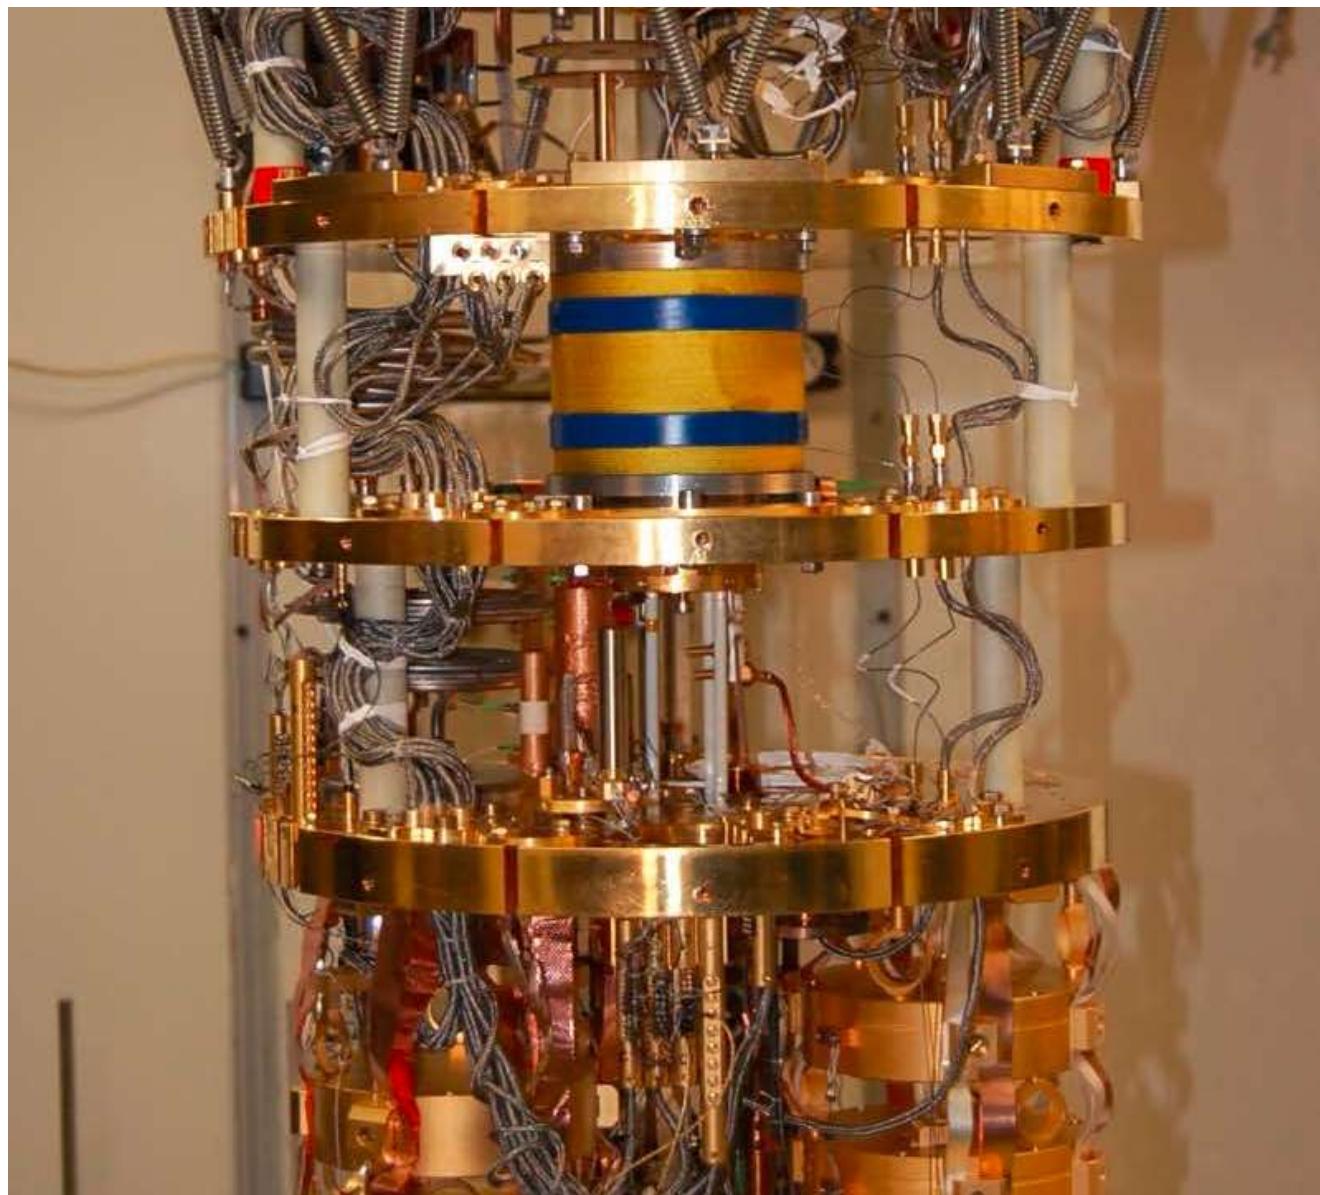

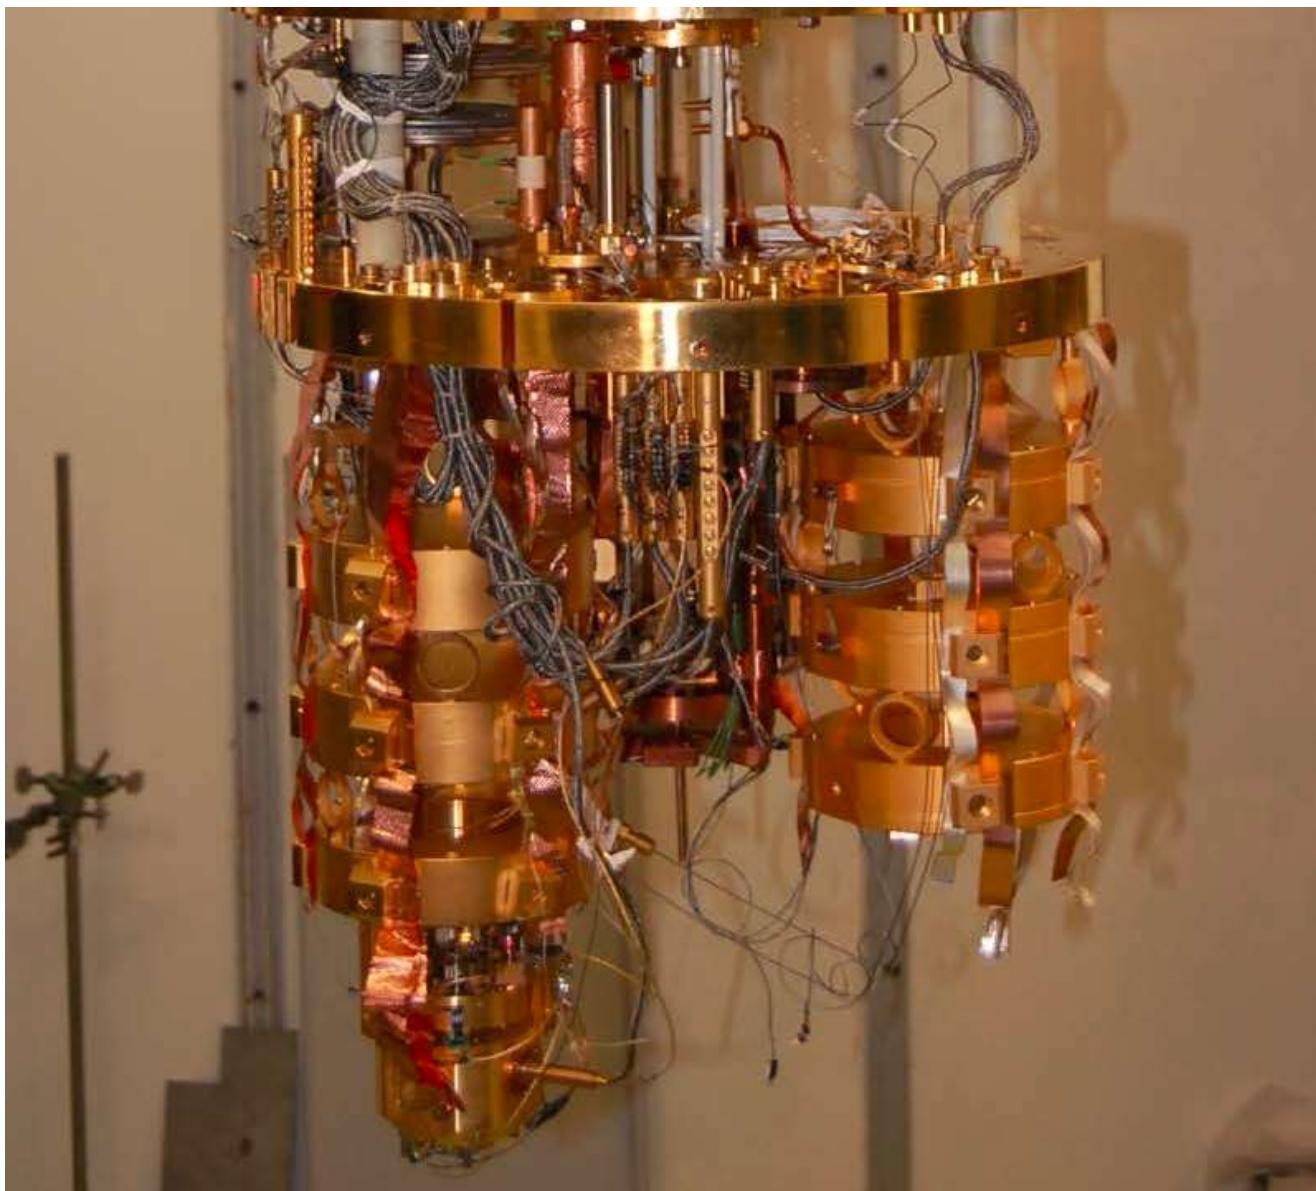

The coarse approach

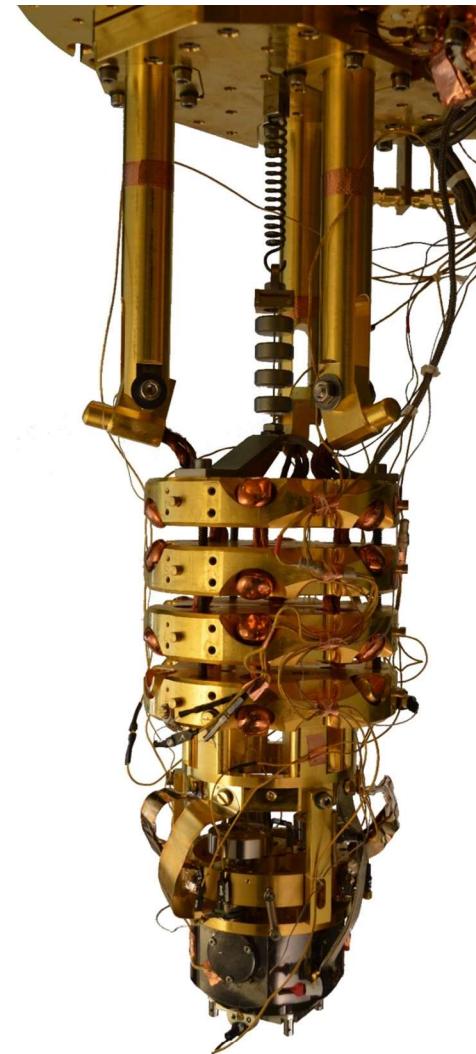

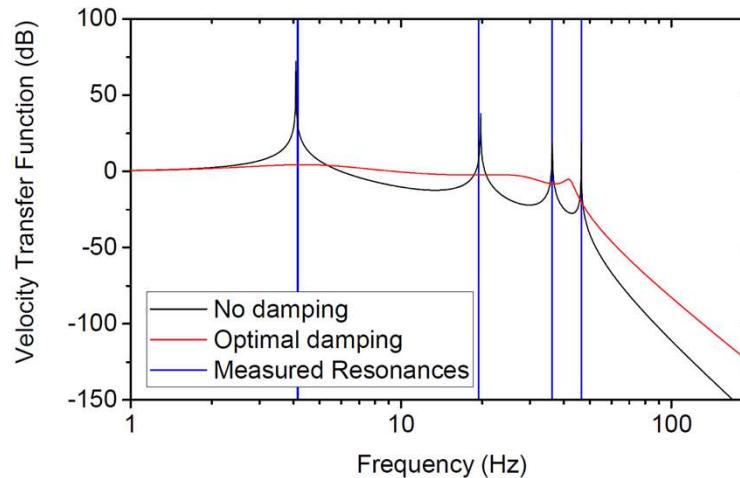

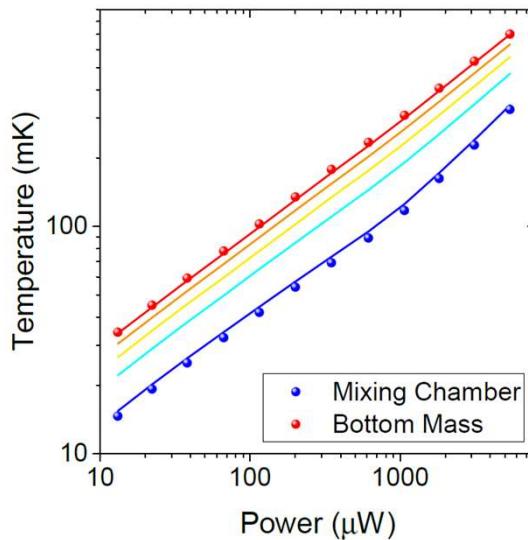

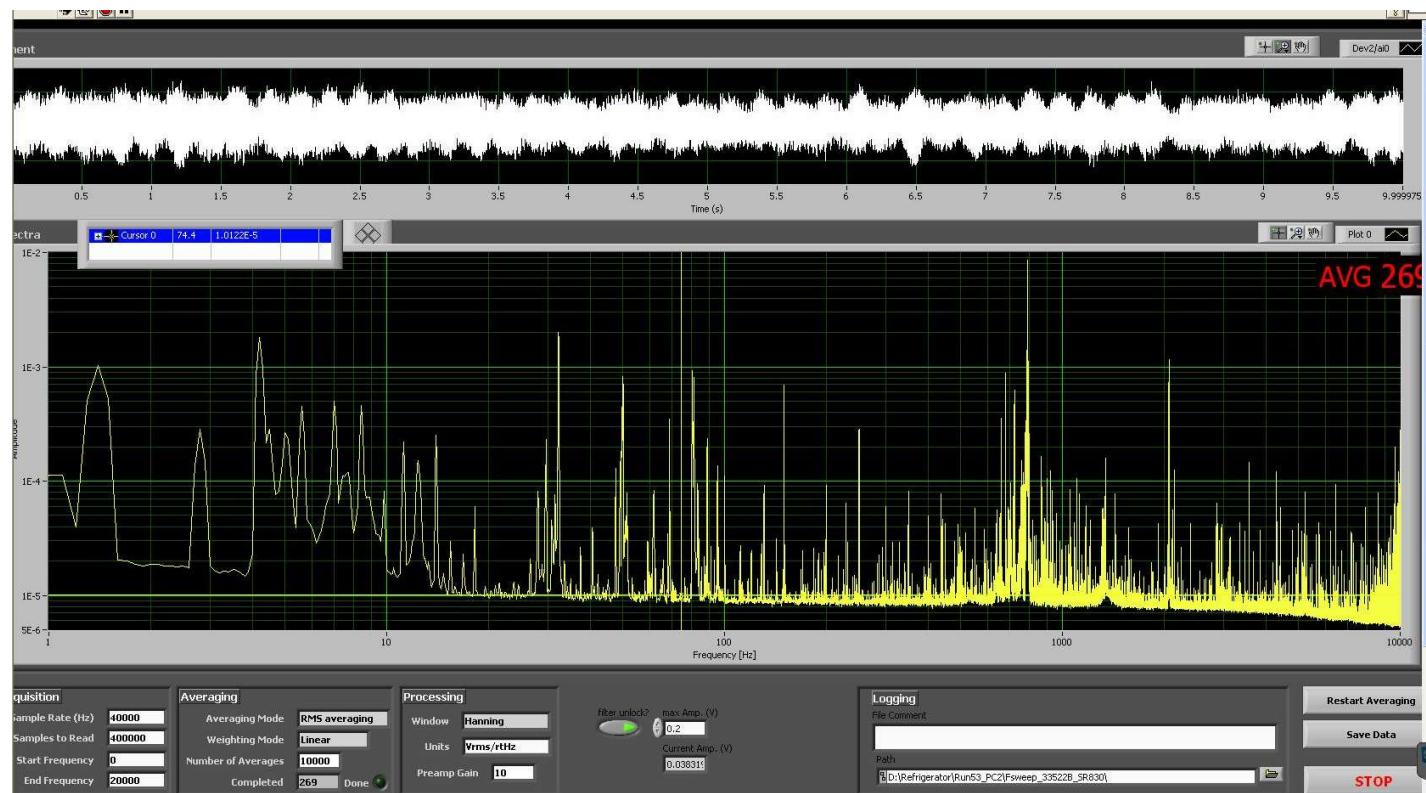

Vibration isolation

thermal motion at 10mK, $k=3E-5\text{N/m}$ is 60pm.
If $Q=60.000$ you can allow only ...
... 1 femtometer of motion...

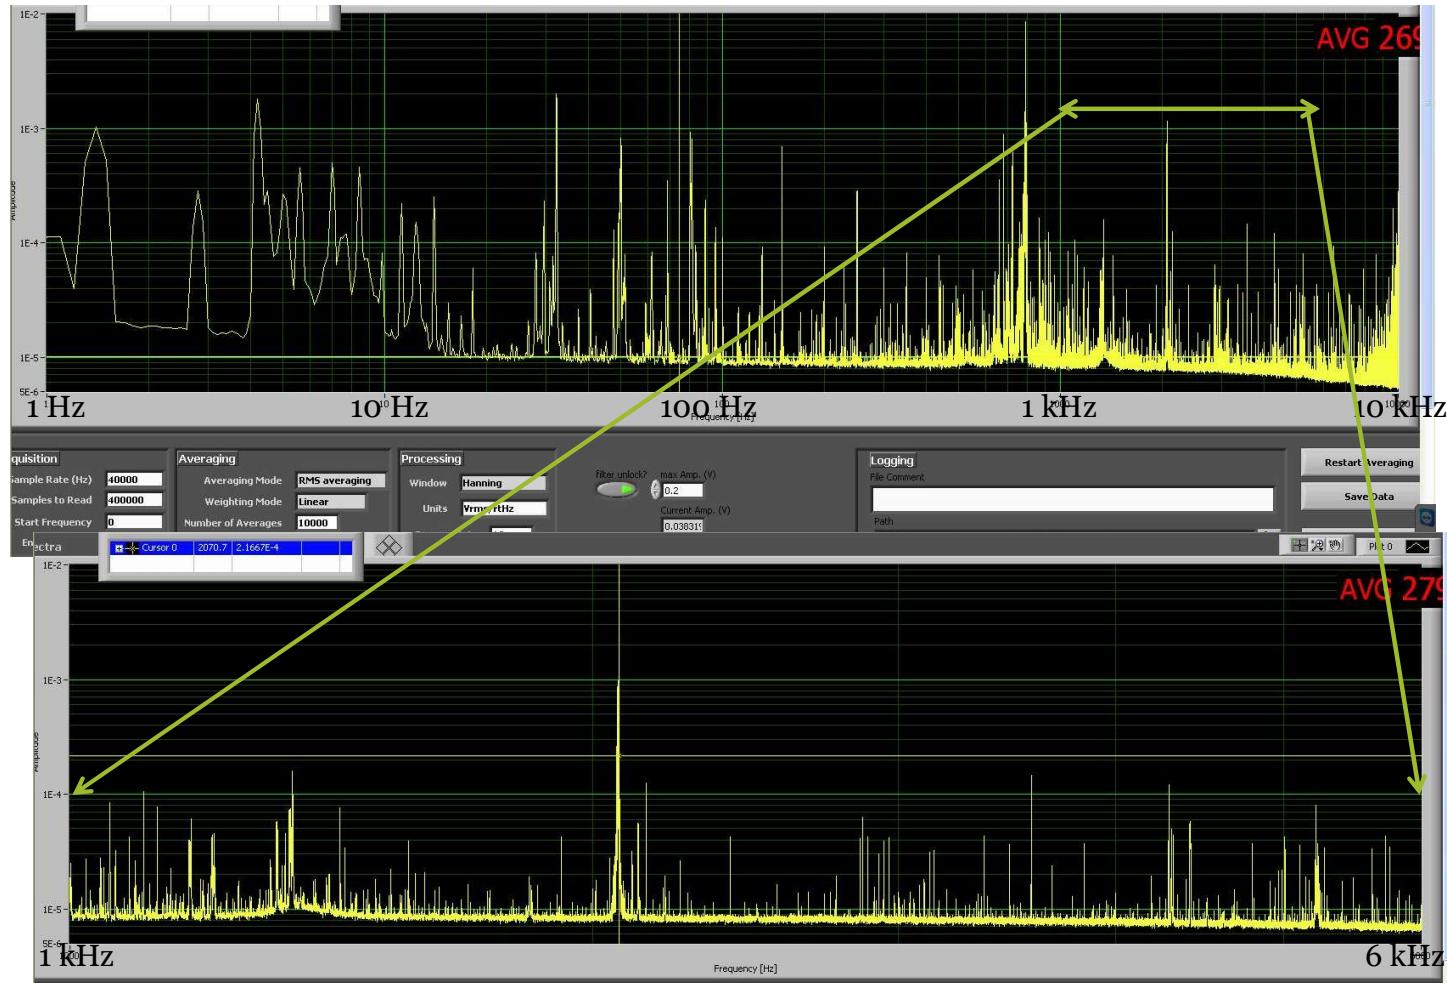

- Cooling power 113 μW at 100 mK
- Attenuation > 100 dB @ 100 Hz
- Base temperature 10.5 mK
- Modular design, easy to adapt
 - e.g. softer springs for lower freq force sensor

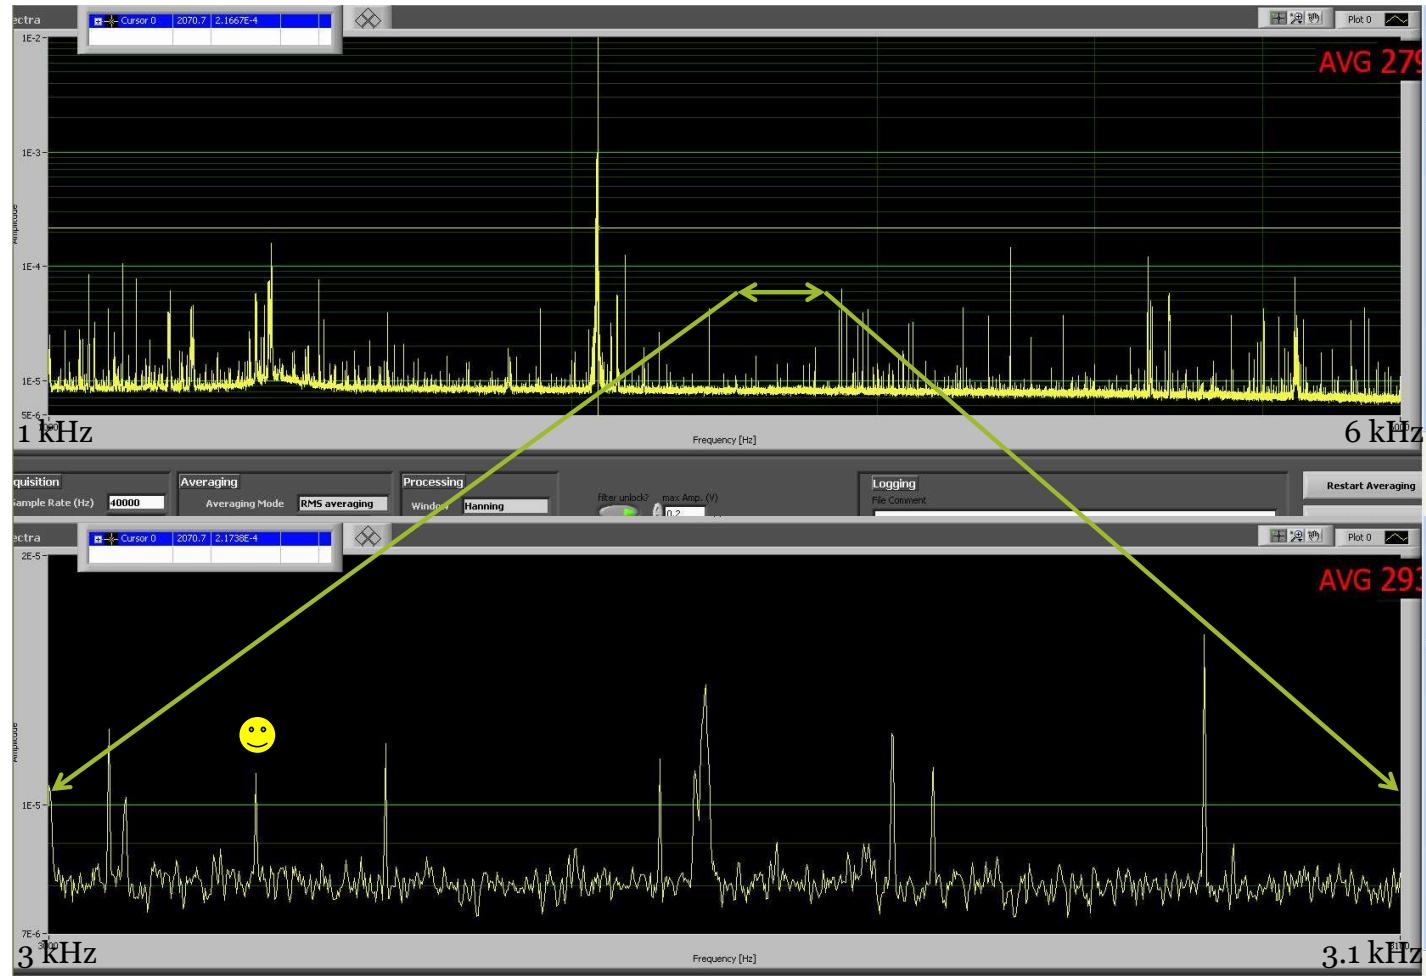

10 seconds of data in the early days of SQUID detection

Things have been cleaned up

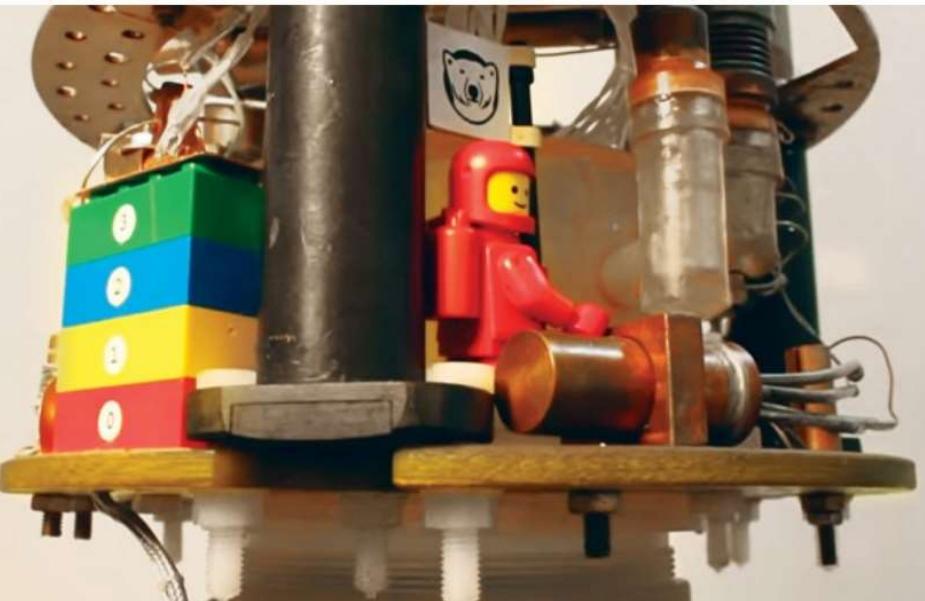

Lower temperatures.
 <1 mK with PrNi₅
demagnetization.
Connect to expt?

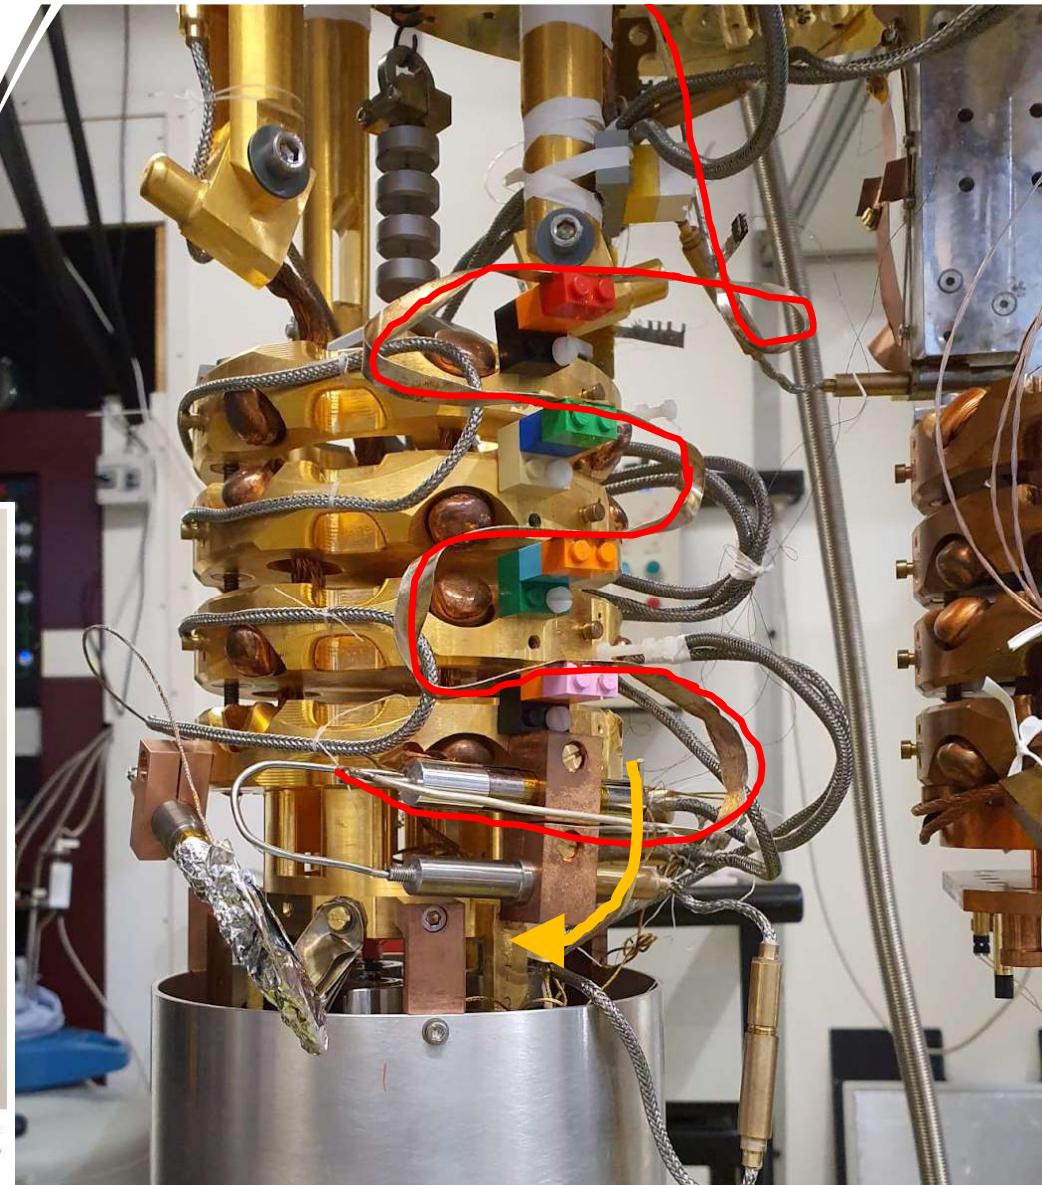

Bring <1 mK to the expt

A big thankyou to George Pickett!

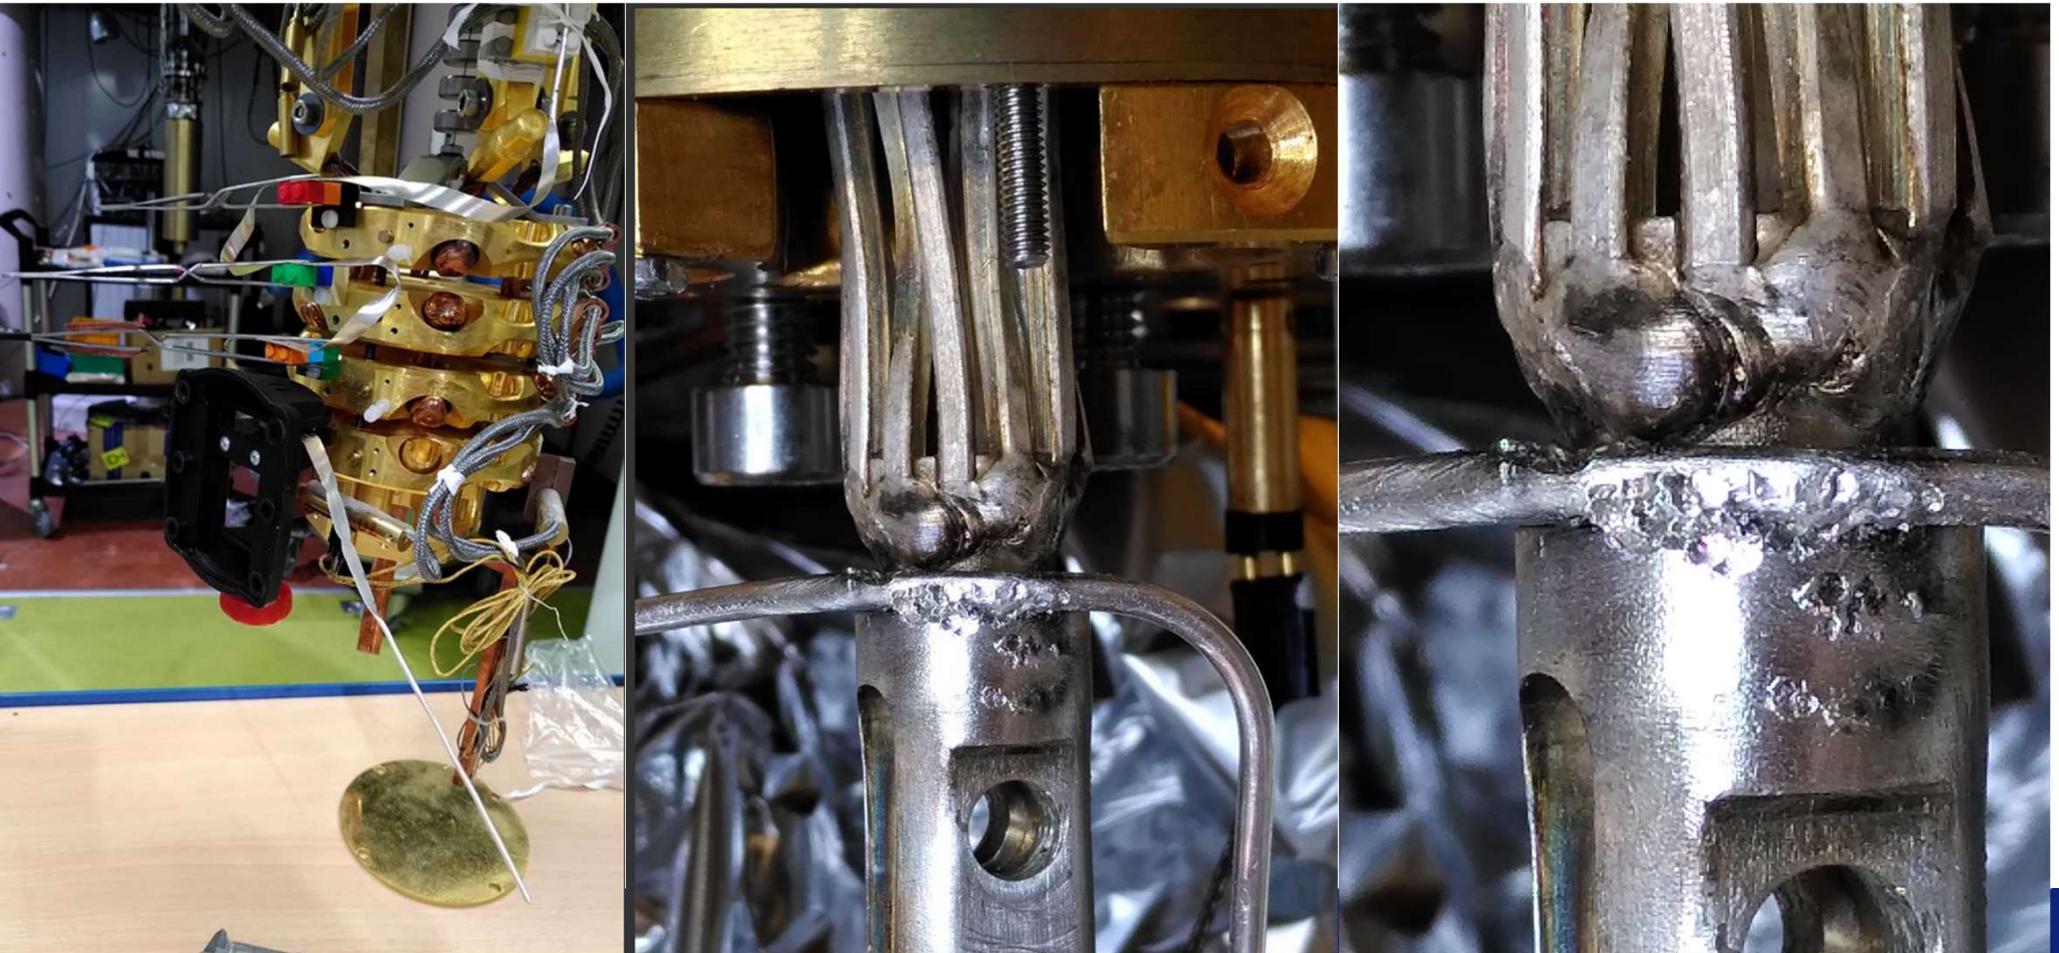

Credit: Josh Chawner

Chilled out: Researchers measured the thermal conductivity of Lego bricks near absolute zero, with a Lego "cryonaut" along for the ride.

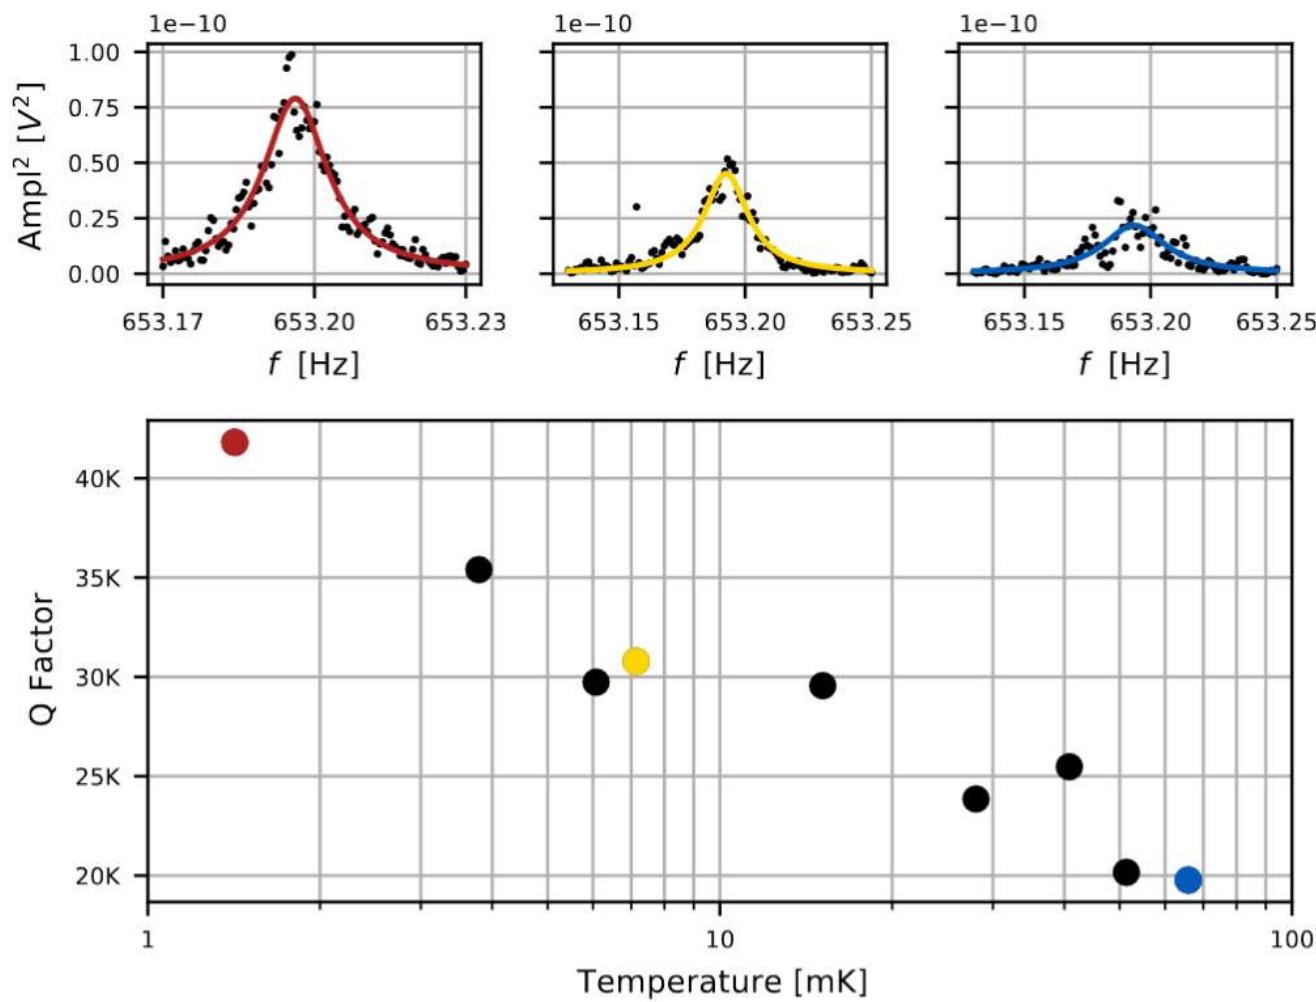

Welding on the cryostat. Not in the workshop

Temperature has an effect on Q-factor

- IBM style cantilever with large magnet (7 micrometer diameter)
- @ 1 mK: 0.06 aN/rtHz

MENSENWERK

Ontwikkelingen in technologisch-wetenschappelijk onderzoek samen met bedrijven

- Ontwikkelingen in de funding
 - Bedrijven waren een pré bij sommige aanvragen
 - Bedrijven werden een noodzaak bij sommige aanvragen
 - Bedrijf moet geld bijleggen om mee te doen met EU aanvraag
 - ...
 - Bedrijf krijgt geld van EU als het meedoet
 - Bedrijven krijgen geld voor ontwikkeling
- Samenwerking met Hogescholen / LIS
 - In toenemende mate ook in onderzoeksaanvragen

Field lab (QDNL)

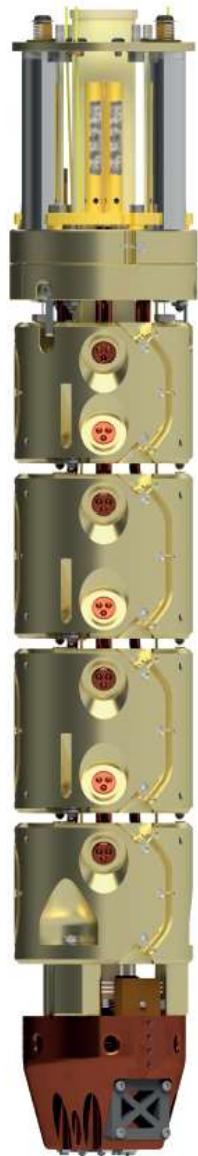

- Leiden Cryogenics (1992)
- Leiden Probe Microscopy (2004)
- Leiden Spin Imaging (2014)
- Onnes Technologies (2018)
- Quantamap (2022)

Field lab

Demo/test SPM systems at
 $< 100 \text{ mK}$

arQtika LCW X1

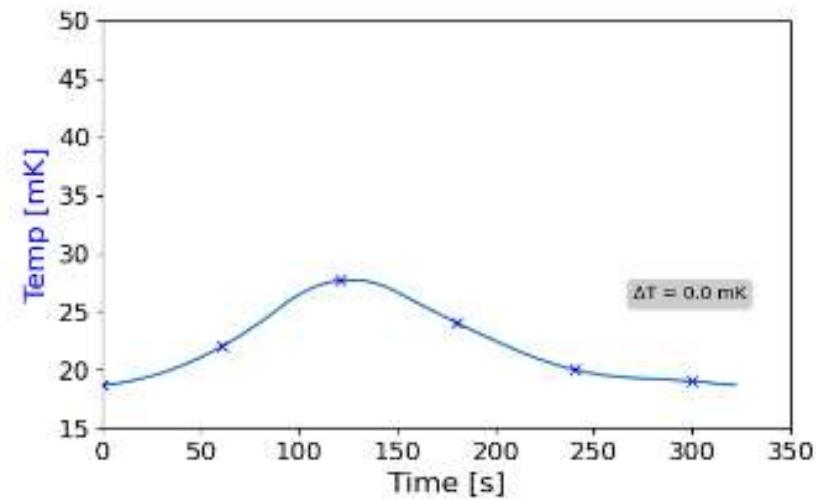

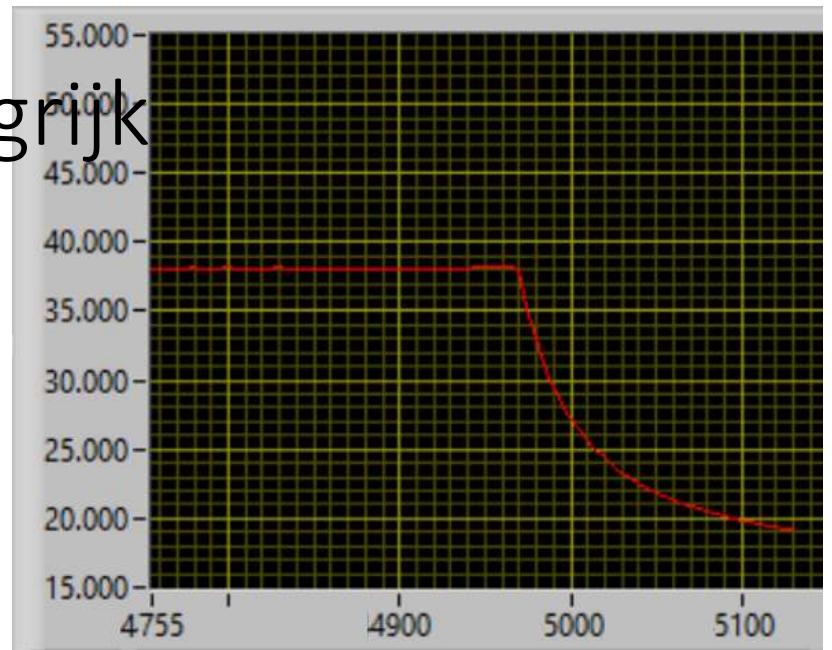

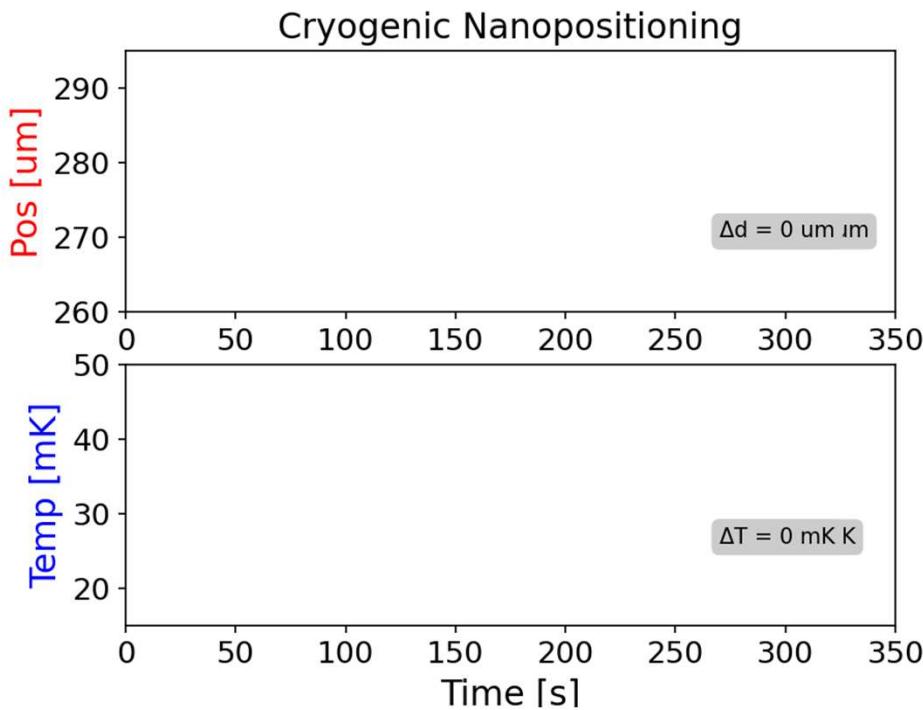

Field lab

- UHV
- Microscope transfer
- Sample transfer
- Optical fibers

Thermometrie is ook best belangrijk

- Hightech Development Leiden
Wim Bosch

Future
towards 100 microkelvin?

Combine:

- the vibration free platform
- the ability to precool to 1 mK
- miniature electro magnets that make 100mT in 1mm³ volume
at 10 mK

Can we make a miniature nuclear demagnetization stage ?
