Applications in many surprising directions

TIGRE: open source software for medical imaging

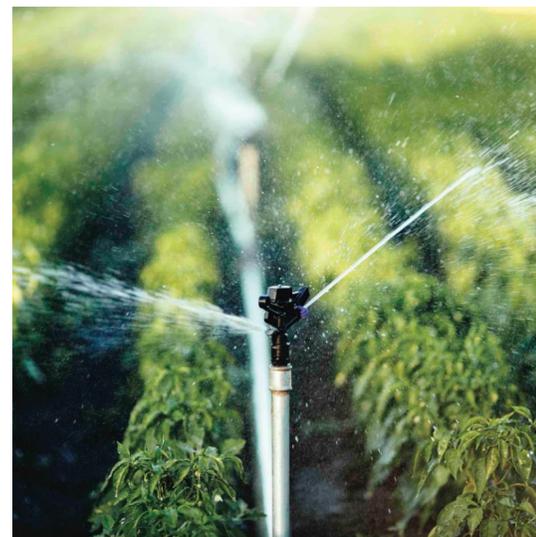

VESPER maiden test for jupiter environment

ROOT/TMVA: big data and machine learning software

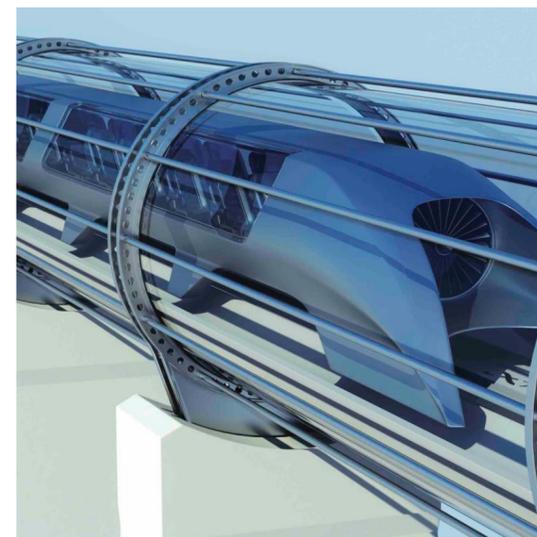

HPL: high pressure laminates with anti-dust properties

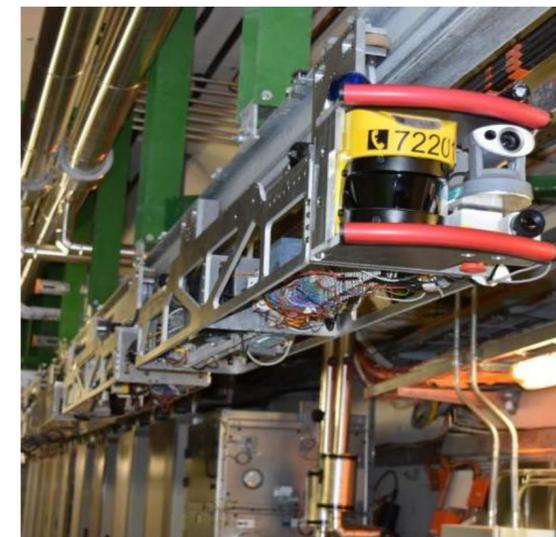

FOSS4I: help with water shortage

Sensor technology on drones

Hyperloop: sonic speeds in high-vacuum tubes

TIM: autonomous safety monitoring system

spin-off

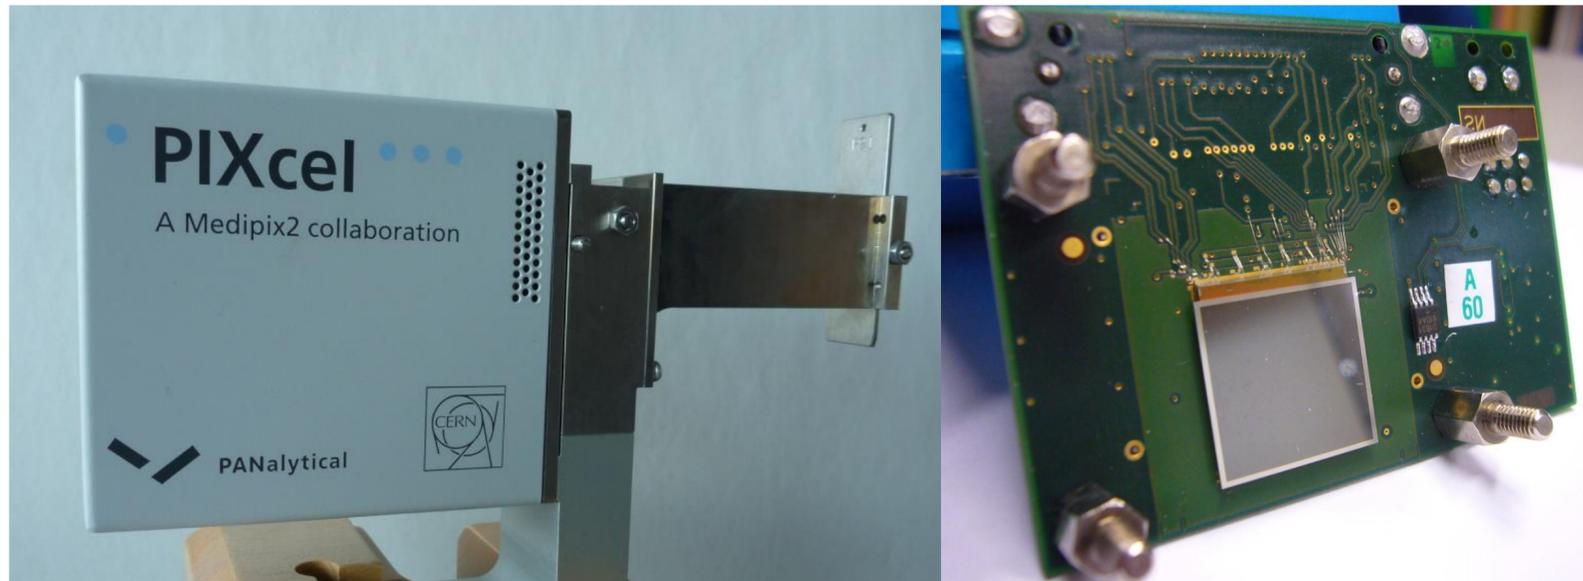

Started the involvement towards a commercial product 20 years ago

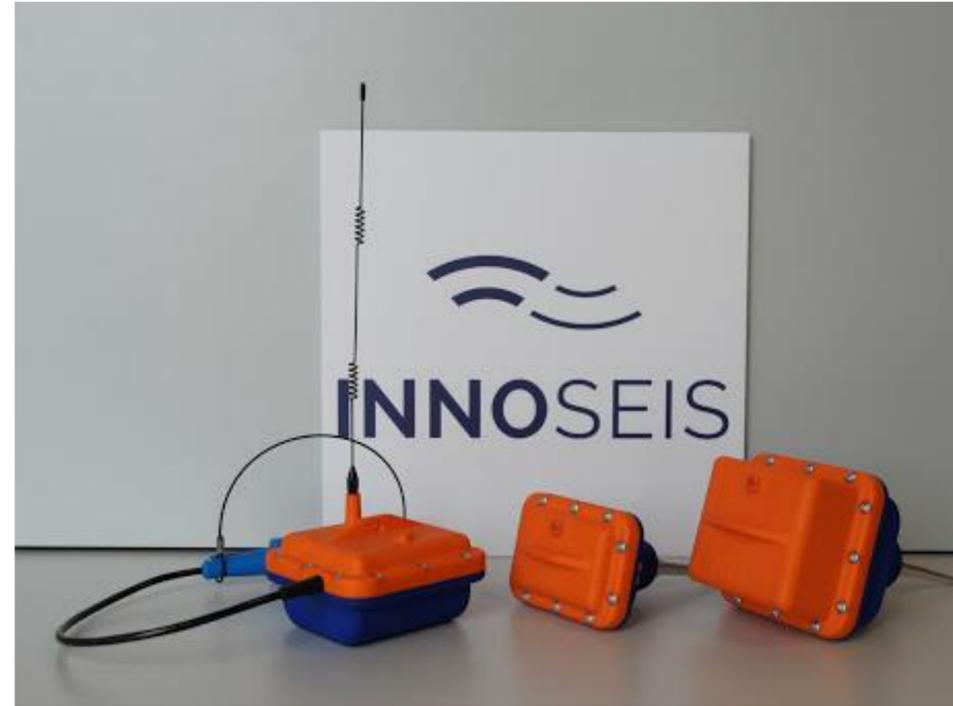

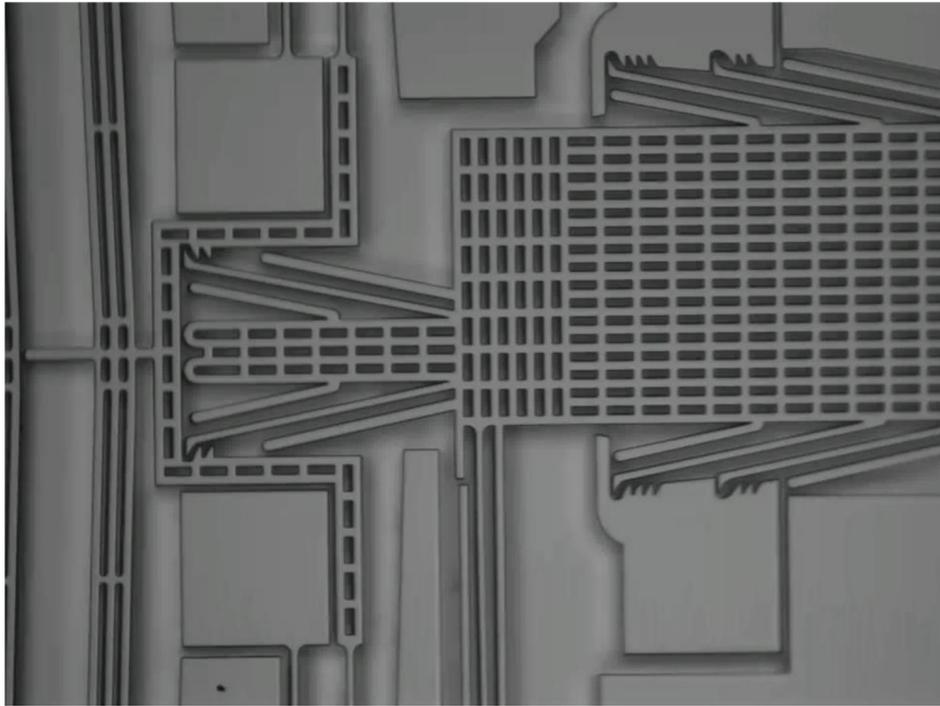

Roelof de Vries will present details

*Founded in 2011
Grown to ~25 employees*

Hans Brouwer will present experience

Spin off from gravitational physics

INNOSEIS
Founded in 2013
Grown to ~ 15 employees

Distributed wireless networks

- Advanced sensors: e.g. accelerometers
- Mesh network protocols

Femtometer positioning

- Vibration attenuation systems with 10^6 suppression factor

CERN Hackathon

technology

HIGH TECH XL

Nikhef

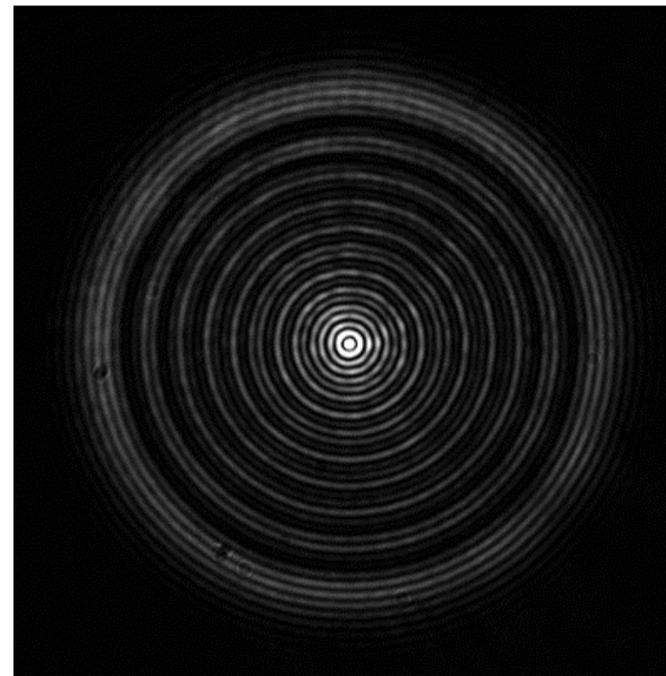

Business incubator

CO2 cooling

incooling

Structured laser beam

inPhocal

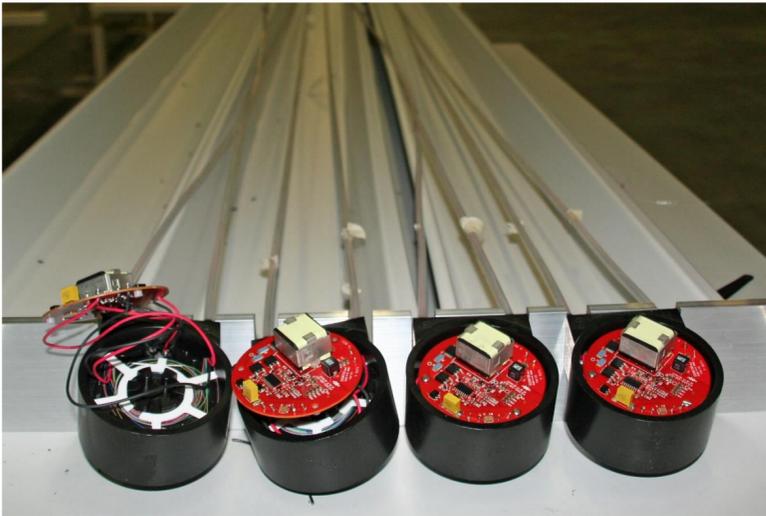

Compact accelerator

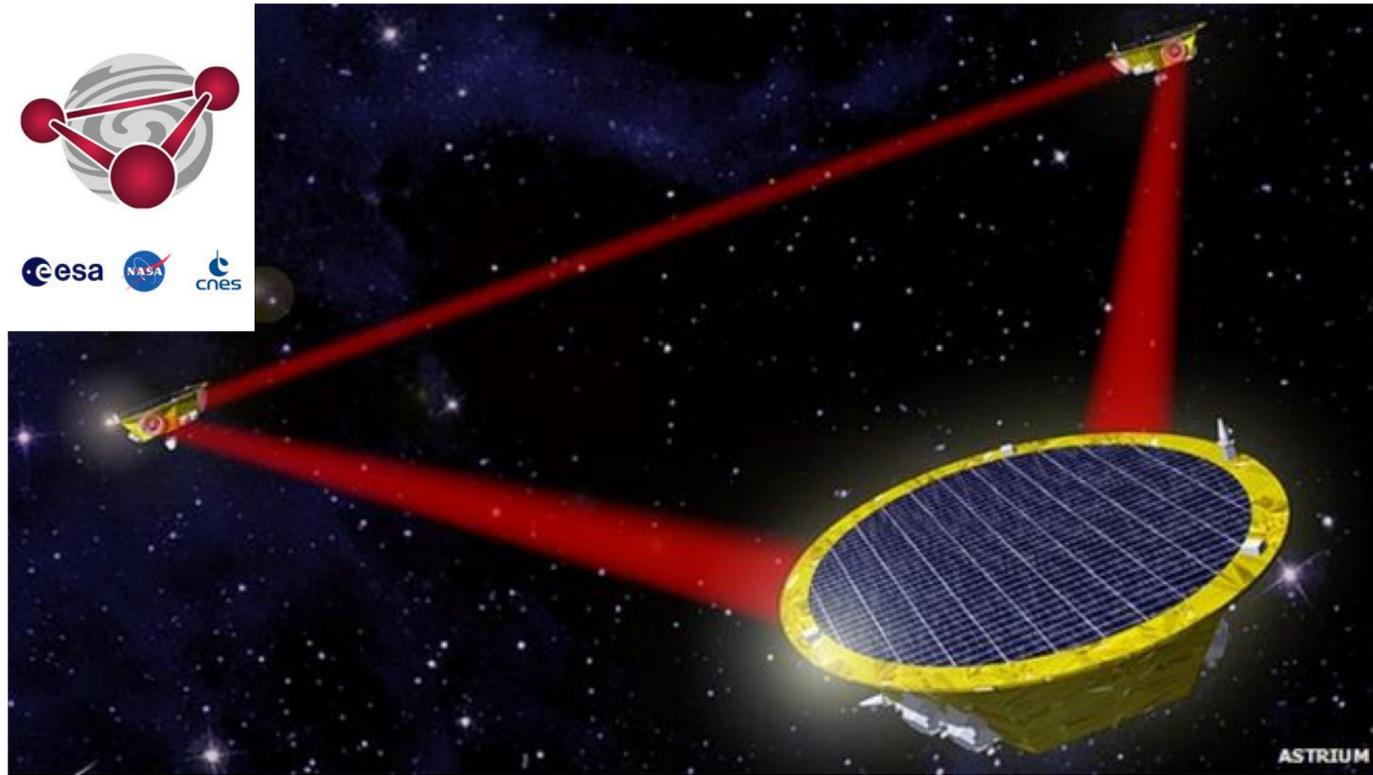

Dynaxion

Co-development

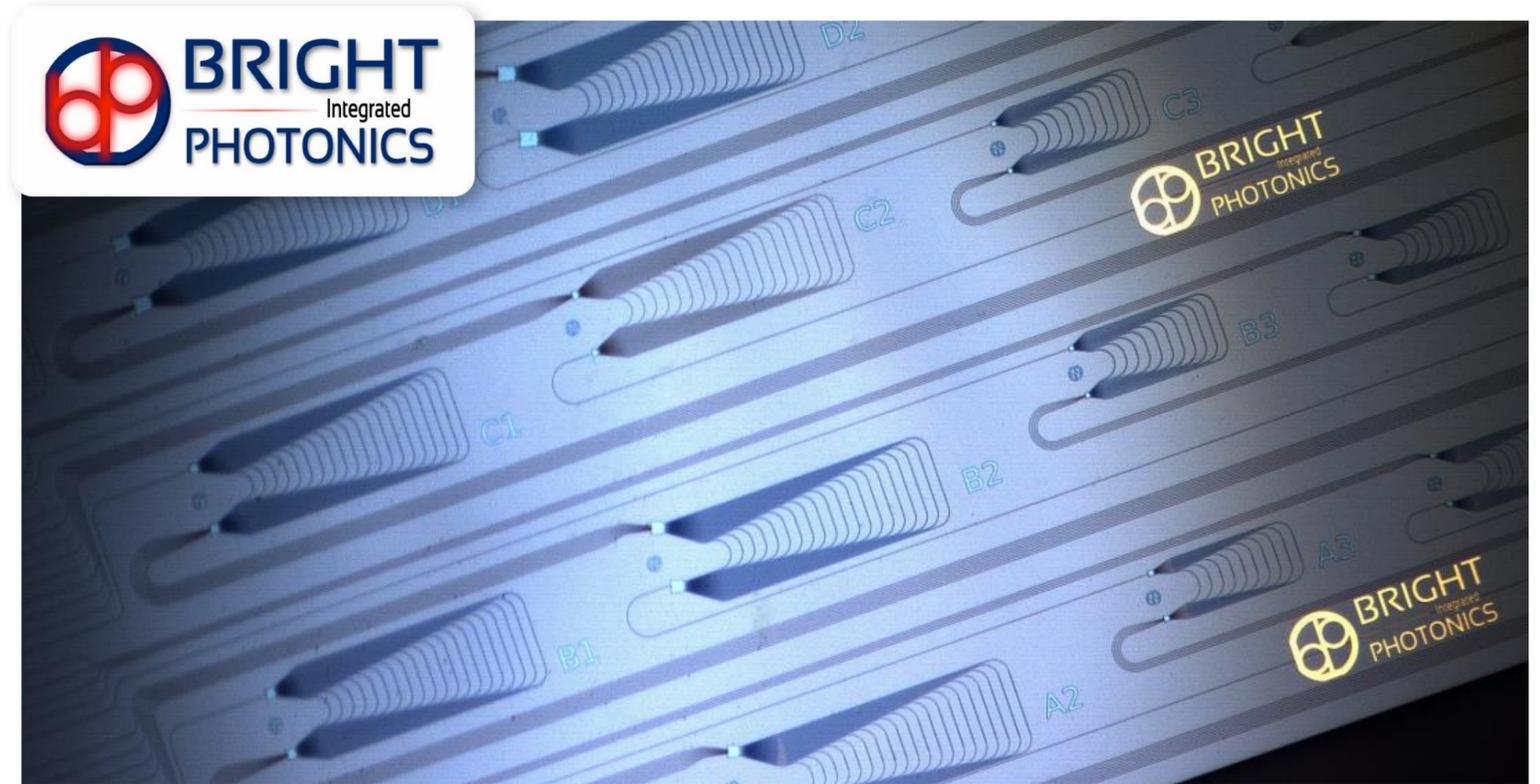

KM3NeT ("Cubic Kilometre" Neutrino Telescope)

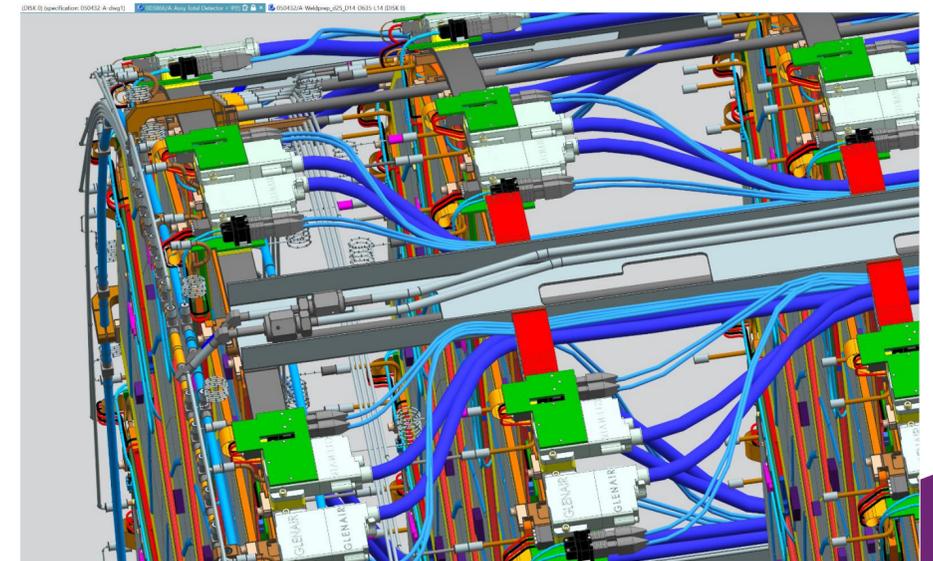

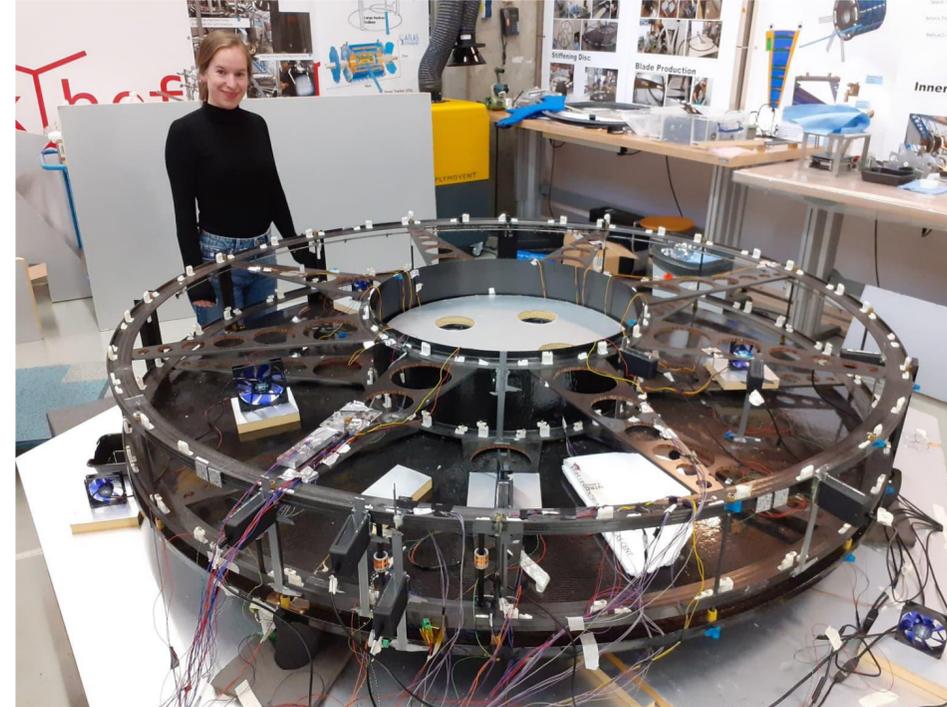

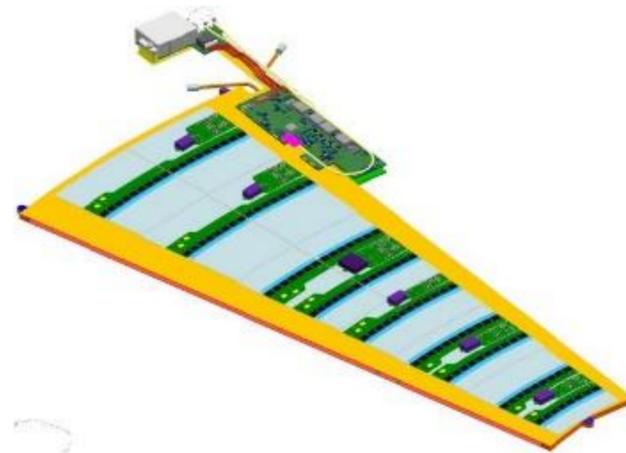

LISA (Laser Interferometer Space Antenna)

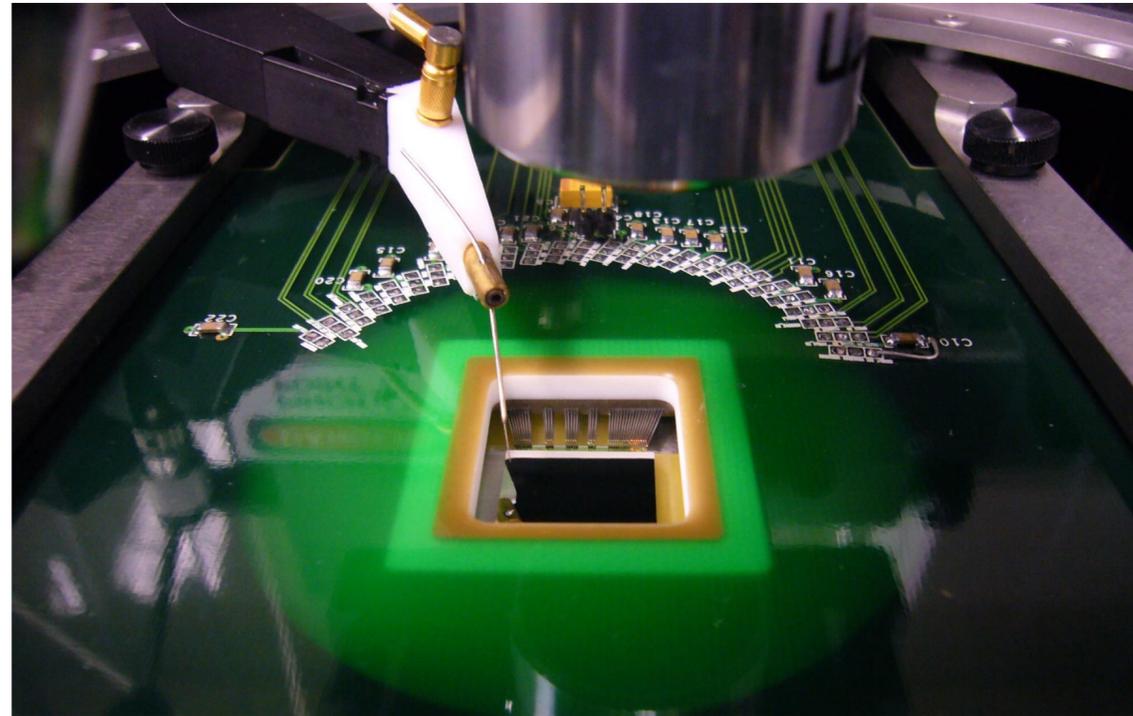

Detecting gravitational waves in space requires sensitive photon detectors pushing the domain towards the use of different materials, simulations and applications.

Outsourcing

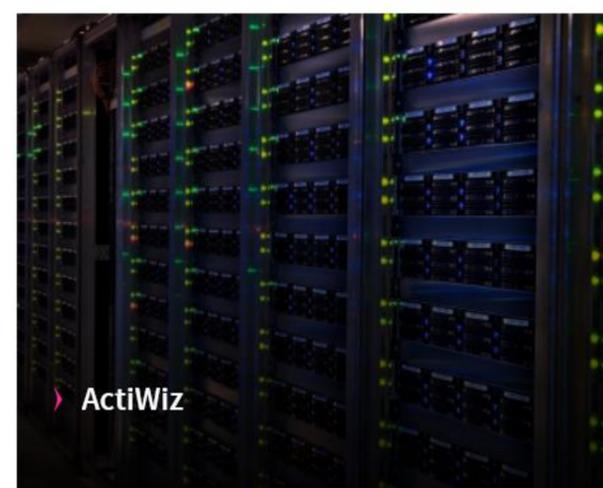

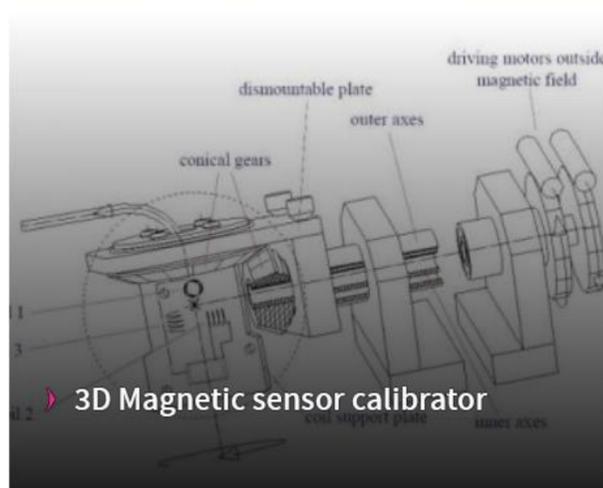

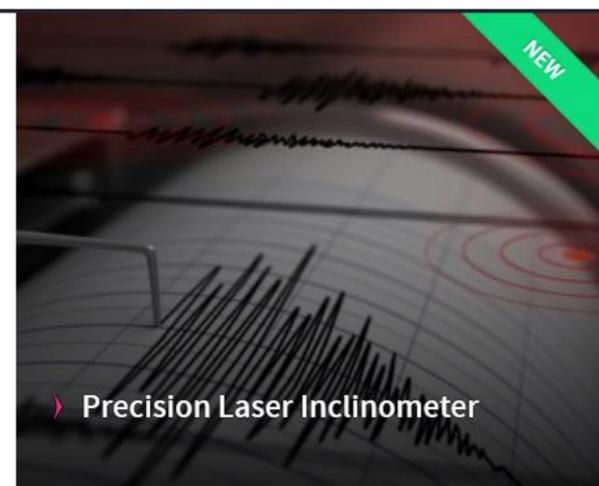

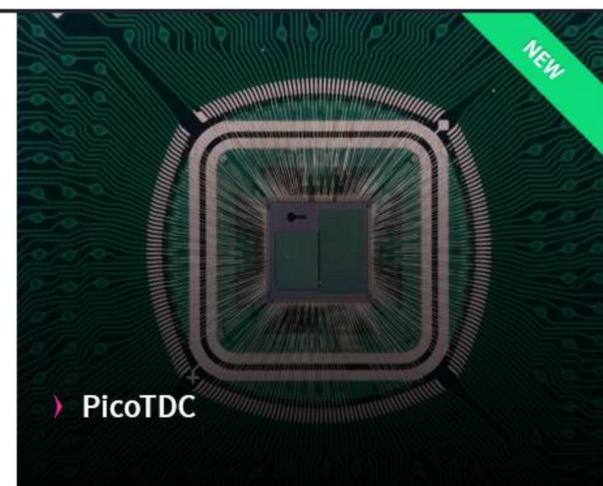

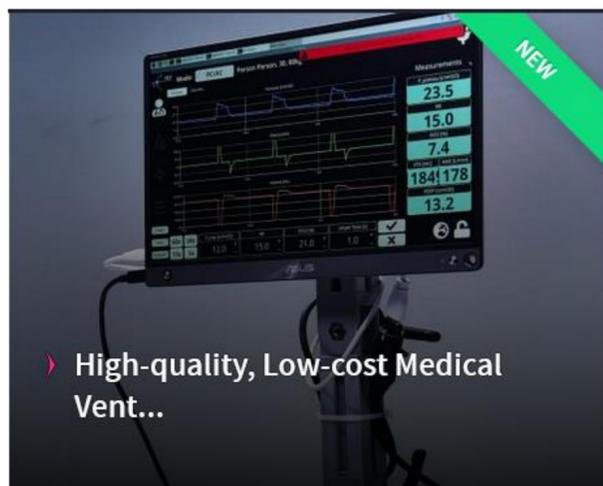

Facility sharing

Details on the CERN website:

- <https://kt.cern/who-are-you/industry-how-collaborate-cern>
- <https://knowledgetransfer.web.cern.ch/technology-portfolio>

The ILO-net aims to improve:

- Geo-return
 - Co-development
 - Knowledge transfer
-
- The balance is different for each institute and related Big Science organisation
 - If you are interested, please reach out to me!
