

High Tech Institute

High Tech Institute facilitates the growth of individuals, teams or organizations, both in technical width, depth and in leadership and soft skills. The institute is trusted by leading high tech companies worldwide. Several of its courses are certified by the European Organization of Precision Engineering (Euspen).

All courses are available as open enrollment or as in house editions, which can also be customized. On request, we also develop tailor-made trainings, which are not part of our regular portfolio.

High Tech Institute was formerly known as Philips Centre for Technical Training (CTT). For decades researchers and scientists of Philips Research developed the technical trainings with their leading edge knowledge and CTT made them available for the people of the Philips product divisions.

In 2010 Philips decided to spin out the CTT activity and make its trainings available for the whole high tech ecosystem in The Netherlands. At that point Philips had spun out lots of hightech companies like NXP (chips) and ASML (lithography equipment), Fei (electron microscopes) and Panalitycal (analitical equipment).

The training portfolio of High Tech Institute is developed by specialized partners like Mechatronics Academy (mechatronics, design and vacuum technology), Tech to Prof (electronics and optics), Systems and Software Academy (system architecture and software technology) and Settels Savenije Friedrich (soft skills and leadership).

High Tech Institute acts als the marketing- and salesorganisatie for its content partners.
